

# PORTABLE LIGHTING PRODUCTS

## HeadsUp Lite Series

Order Code: 2630

Talk about options. Pelican's 1 watt HeadsUp LED offers three brightness modes. Pressing the on/off button cycles through the modes letting you choose the amount of light you need. The LED module provides 10,000 hours of burn time and is built tough to withstand the hard knocks that come with the job.

Have you ever been left in the dark with dead batteries? Those days are over. A high-tech battery gauge indicates the level of battery use. One set of batteries provides up to 24 hours of burn time depending on brightness mode. Holding the on/off button down for three seconds puts the HeadsUP LED in flashing mode. Perfect for emergencies or night visibility.

The cloth and rubber straps easily adjust so the light and battery pack fit comfortably on your head. The battery pack is in the back to provide balance, and the head pivots to angle light where you need it for hands free use.

Pelican's triple mode LED.  
The hybrid of hands free lights.

2630 Battery Indicator
